Portfolio: <https://rameshkannan-portfolio.netlify.app/>

Summary

Aspiring Software Engineer with hands-on experience in **backend** and **web application development** using **Java (Spring Boot)**, **Python (Django)**, **RESTful APIs** and **PostgreSQL**. Strong understanding of data structures, OOP, and client-server architecture. Experienced in building scalable APIs, integrating frontend applications and working with **SQL** and **NoSQL** databases.

Education

Master of Science in Computer Science. CGPA: 7.8. St. Xavier's College, Palayamkottai. Graduation Year: **2026**.

Bachelor of Science in Computer Science. CGPA: 6.8. St. Xavier's College, Palayamkottai. Graduated Year: **2023**.

Skills

- **Programming Languages:** Java, Python, JavaScript, C and C++.
 - **Frameworks & Libraries:** Spring Boot, Django, React, Pandas, NumPy.
 - **Web Technologies:** RESTful APIs, HTML5, CSS3, Redux (basic).
 - **Databases:** PostgreSQL, MySQL and MongoDB.
 - **Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Client-Server Architecture
 - **Tools & DevOps:** Git, GitHub, Docker (Used for local deployment).
-

Experience

Team Info-Soft, Tirunelveli. Internship Python Full-Stack Web Development

- Contributed to backend development of a Library Management System during a 35-day internship.
 - Worked with database operations involving 5+ relational tables for book and user management.
 - Assisted in developing and testing backend functionalities for efficient record handling.
 - Applied full-stack development concepts and industry best practices in a real-world project.
-

Projects:

Secure API Gateway for Microservices Architecture – Spring Boot, JWT, REST, PostgreSQL

- Architected a microservices-based system with an API Gateway handling 10+ REST endpoints across multiple services. Implemented JWT-based authentication and RBAC, securing 100% of protected APIs and ensuring role-level access control.
- Designed centralized routing layer, reducing direct service exposure and improving request handling efficiency by ~30%. Enabled request filtering and basic rate limiting, improving system reliability under concurrent loads.
- Built a domain-agnostic architecture, adaptable to Healthcare, E-commerce and Enterprise systems with minimal configuration changes.

E-Learning Platform | React, Django, PostgreSQL

- Developed a full-stack e-learning platform supporting 3 user roles (Admin, Instructor, Student).
 - Designed and integrated 10+ REST APIs for authentication, course management, and enrollment.
 - Built a PostgreSQL database with 6+ normalized tables for users, courses, enrollments, and progress tracking.
 - Implemented JWT-based authentication and role-based authorization for secure access control.
-

CERTIFICATION & ASSESSMENTS

- **NPTEL** – Python for Data Science (Elite Certification)
- **LearnTubeAI** - Java Assessment Certification
- **TCS National Qualifier Test (NQT) – Validity : 14/04/2026 - 14/04/2028 – Score: 71.99 %**
- **Great Learning** – Introduction to Deeplearning
