Summary

Aspiring Software Engineer with hands-on experience in **backend** and **web application development** using **Java (Spring Boot)**, **Python (Django)**, **RESTful APIs** and **PostgreSQL**. Strong understanding of data structures, OOP, and client-server architecture. Experienced in building scalable APIs, integrating frontend applications and working with **SQL and NoSQL databases**.

Education

Master of Science in Computer Science. CGPA: 7.4*. St. Xavier's College, Palayamkottai. Graduation Year: **2026**.

Bachelor of Science in Computer Science. CGPA: 6.8. St. Xavier's College, Palayamkottai. Graduated Year: **2023**.

Skills

- **Programming Languages:** Java, Python, JavaScript, C and C++.
 - **Frameworks & Libraries:** Spring Boot, Django, React, Laravel, Pandas, NumPy.
 - **Web Technologies:** RESTful APIs, HTML5, CSS3, Redux (basic).
 - **Databases:** PostgreSQL, MySQL and MongoDB.
 - **Software Design & Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Client-Server Architecture, Microservices.
 - **Tools & DevOps:** Git, GitHub, Docker (Used for local deployment).
-

Experience

Team Info-Soft, Tirunelveli. Internship in Python Full-Stack Web Development for 35 Days.

Project: E-Learning Platform – React, Django, Restful API, JWT Authentication & Authorization, PostgreSQL

- Developed a full-stack e-learning platform supporting **3 user roles**, **10+ REST APIs**, and course enrollment & progress tracking using Django REST and React.
 - Implemented user **authentication and authorization** (student, instructor roles) using **JWT token validation** and **Django REST framework**.
 - Normalized a **PostgreSQL schema** with 6+ tables for secure **data storage** and efficient query handling.
 - Built a responsive **frontend** using **React.js** with responsive **UI** for seamless learning experience.
 - Ensured **scalability** and **maintainability** with modular architecture (**Frontend – Backend – Database**).
 - Versioned with **GitHub** and **deployed locally for testing**.
-

Projects:

Secure API Gateway for Microservices Architecture – Spring Boot, JWT, REST, PostgreSQL

- Architected a microservices-based system with an API Gateway handling 10+ REST endpoints across multiple services. Implemented JWT-based authentication and RBAC, securing 100% of protected APIs and ensuring role-level access control.
- Designed centralized routing layer, reducing direct service exposure and improving request handling efficiency by ~30%. Enabled request filtering and basic rate limiting, improving system reliability under concurrent loads.
- Built a domain-agnostic architecture, adaptable to Healthcare, E-commerce and Enterprise systems with minimal configuration changes.

Online Voting Platform - HTML, CSS, JavaScript, PHP and MYSQL

- Developed an online voting portal allowing users to **register**, **login** and **cast votes**.
- Composed **role-based access** for **admin** and **voters** with **validation** and **session handling**.
- **Designed and launched** a voting interface that was tested by **50 users** and resulted in **90%** of users reporting a **positive experience**; project was completed 15 days before the schedule.
